

Browser/Desktop notification using pusher

Browser notification helps the user to get notified of any notification quickly.

Requirement:

Your POS must use **https** or must have an SSL certificate installed.

Steps to enable it:

Setup pusher:

1. Signup for a pusher account here <https://pusher.com/>
2. Login to your pusher account.
3. Click on "Create new app"
4. Enter the details:
Name your app,
Select a cluster,
What's your front-end tech? will be jQuery
What's your back-end tech? will be Laravel.
Click on "Create my app" and after that, you will find the pusher details as given in the screenshot below\

Setup in SenangUrus Business:

1. If you're using the [SaaS-Superadmin](#) module then go to Superadmin Settings -> Pusher Settings -> Enter the details: PUSHER APP ID, PUSHER APP KEY, PUSHER APP SECRET, PUSHER APP CLUSTER and save it.
2. If not using SaaS-Superadmin, then login to cpanel/directadmin or FileZilla, open the **.env** file present in the pos code for editing. Then you will find the pusher related configuration. Enter the below configuration:
BROADCAST_DRIVER=pusher
PUSHER_APP_ID=<your pusher app id>
PUSHER_APP_KEY=<your pusher app key>
PUSHER_APP_SECRET= <your pusher app secret>
PUSHER_APP_CLUSTER=<your pusher app cluster>Save the file and the notification will work.

Pusher notifications will not support on IOS devices. You need to disable pusher notifications in IOS for SenangUrus Business.
