

Bulk Edit Products

Bulk edit helps you to edit multiple products at once and saves your time.

To edit multiple products follow the steps:

1. Go to Products -> List Products
2. Select the products you want to edit by clicking on the checkbox present in each product row.
3. Scroll down you will find the **Bulk Edit** option, click on it and you can edit the selected products.
4. Also, in the bulk edit screen you can add any other products to edit them.

How to Enable Bulk Edit Option

The **Bulk Edit** feature is disabled by default and needs to be enabled from the backend configuration.

Follow these steps to enable it:

1. Open the file: config/constants.php
2. Locate the following line: 'enable_product_bulk_edit' => false,
3. Change it to: 'enable_product_bulk_edit' => true,
4. Save the file.

Once enabled, the **Bulk Edit** option will be available in the **Product List** screen, allowing you to update multiple products at once.
