Issue: Product not shown on view

Sometimes, you may encounter an issue where the “List Products > View” function does not work. This problem may arise from the permission restrictions for the uploads folder in the code base.

1. Log in to your server and find the pos/public/uploads folder. Then, change the permission to ‘777’.
2. Save the file and try to view the product again.

If you still have the issue, open a ticket in support and post the issue.
